

18S ASV alpha diversity – plastic loading models

Weeks

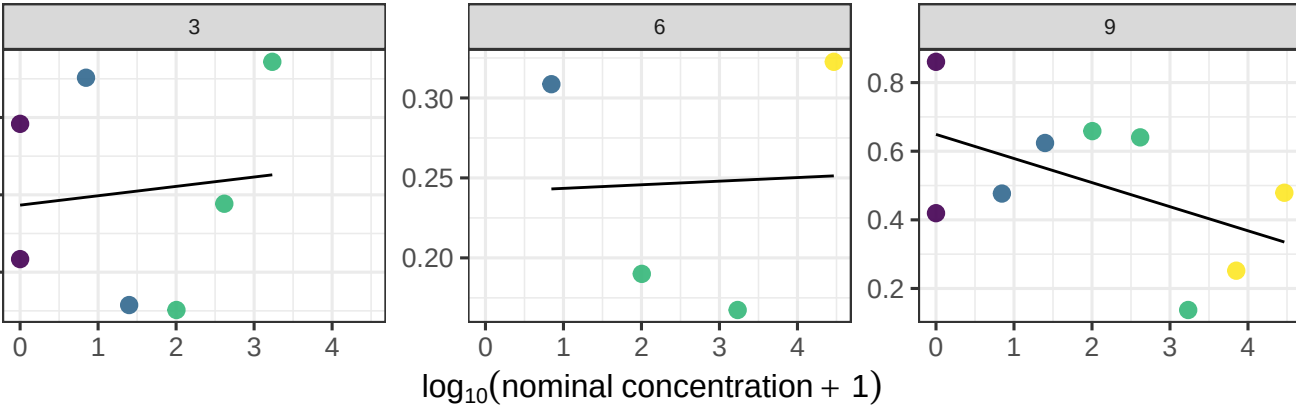

Interaction: $p = 0.64$ (BH = 0.64)
Within-group plastic slopes (BH):
3: $p = 0.731$
6: $p = 0.731$
9: $p = 0.731$

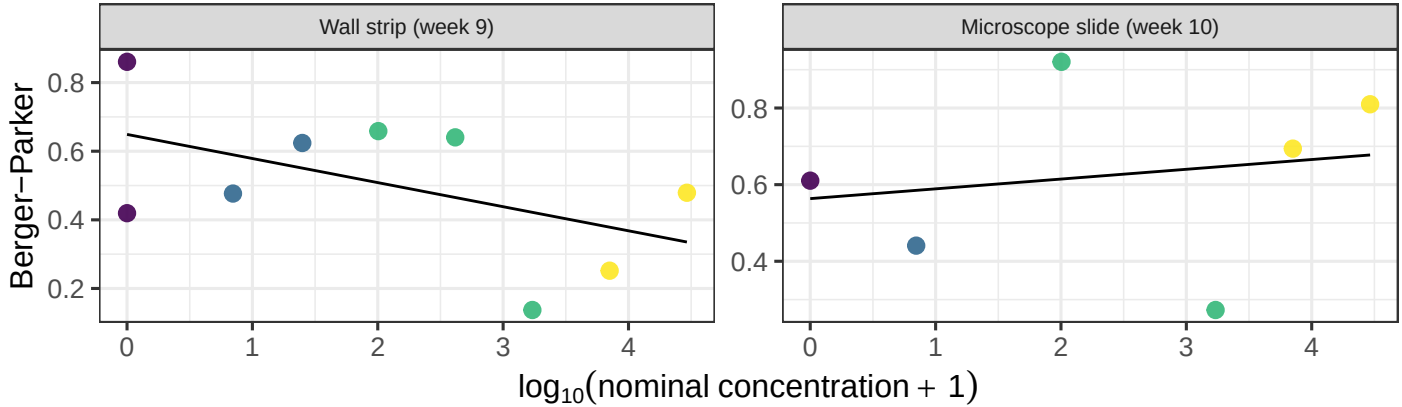

Location

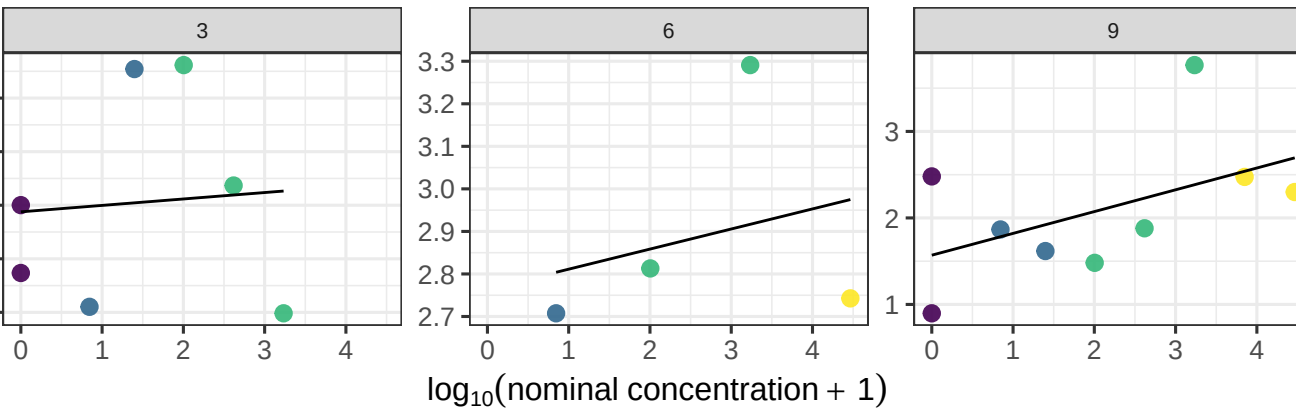

Interaction: $p = 0.193$ (BH = 0.193)
Within-group plastic slopes (BH):
Wall strip (week 9): $p = 0.578$
Microscope slide (week 10): $p = 0.578$

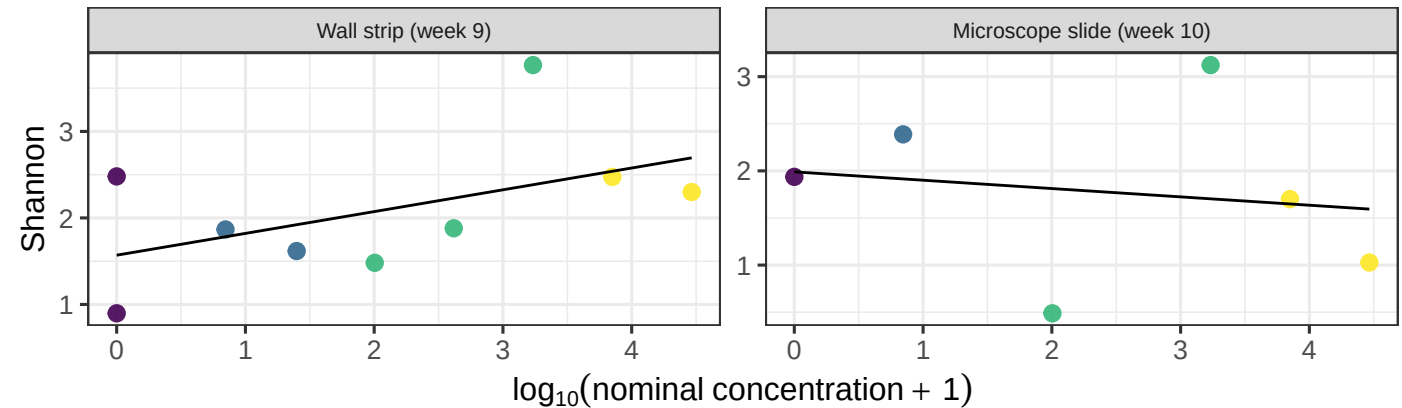

Interaction: $p = 0.334$ (BH = 0.64)
Within-group plastic slopes (BH):
3: $p = 0.884$
6: $p = 0.884$
9: $p = 0.463$
(model: logit Berger-Parker)

Interaction: $p = 0.0392$ (BH = 0.0588)
Within-group plastic slopes (BH):
Wall strip (week 9): $p = 0.283$
Microscope slide (week 10): $p = 0.413$
(model: logit Berger-Parker)

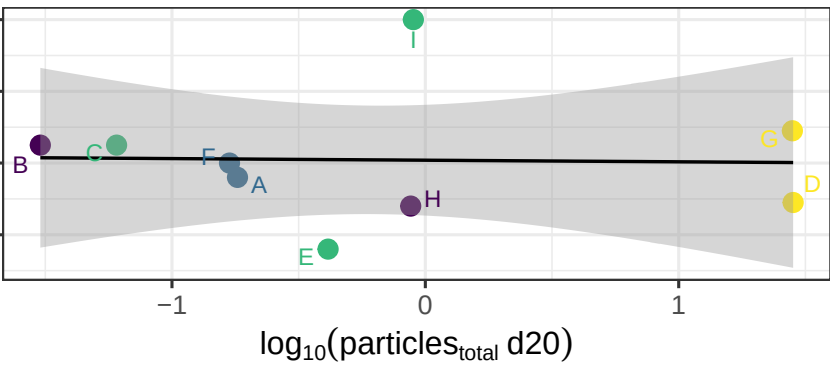

Interaction: $p = 0.43$ (BH = 0.64)
Within-group plastic slopes (BH):
3: $p = 0.979$
6: $p = 0.979$
9: $p = 0.412$

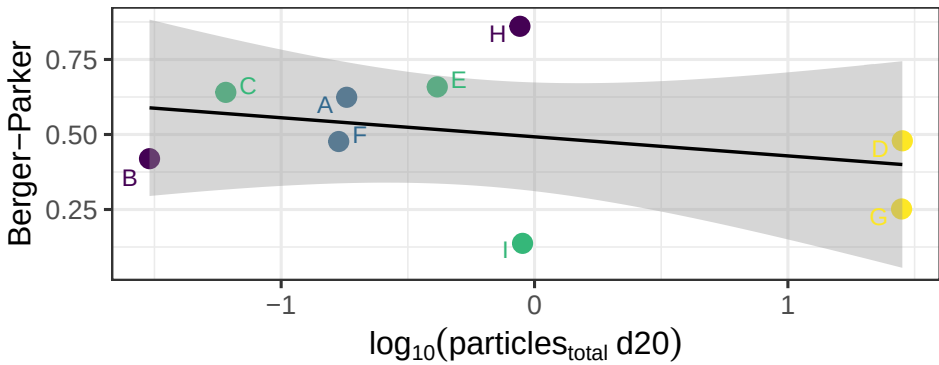

Interaction: $p = 0.0165$ (BH = 0.0494)
Within-group plastic slopes (BH):
Wall strip (week 9): $p = 0.333$
Microscope slide (week 10): $p = 0.344$

Week-9 wall strip | n = 9 corral

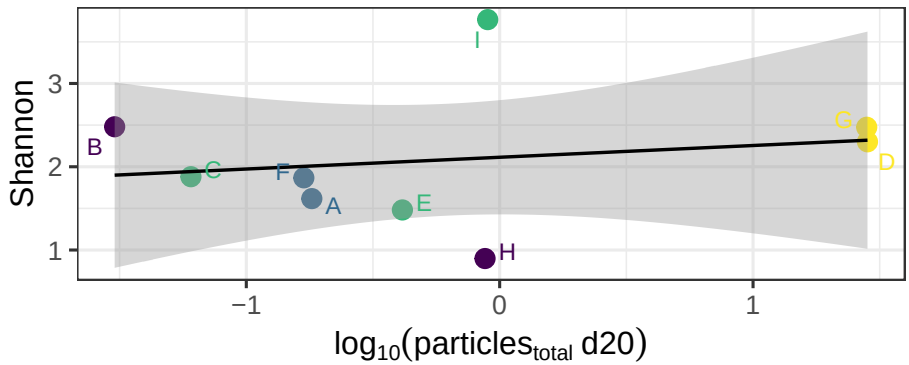

$\log_{10}(\text{retention})$ slope: $p = 0.946$ (BH = 0.946)

Week-9 wall strip | n = 9 corral

$\log_{10}(\text{retention})$ slope: $p = 0.476$ (BH = 0.946)
(model: logit Berger-Parker)

Week-9 wall strip | n = 9 corral

$\log_{10}(\text{retention})$ slope: $p = 0.636$ (BH = 0.946)
